The eldomix 10X range of systems are compact, solvent free, gear pump driven metering and mixing systems.

They are used to apply low to medium viscosity multiple component materials such as epoxies, polyurethanes and silicones within a mixing ratio of 100:100 to 100:5.

The material is supplied from pressure vessels.

Typical applications

- Coating
- Encapsulating
- Gluing
- Rapid Prototyping
- Sealing

The eldomix 60X range of systems are compact, solvent free, gear pump driven metering and mixing systems.

They are used to apply low to medium viscosity multiple component materials such as epoxies, polyurethanes and silicones within a mixing ratio of 100:100 to 100:10.

The material is either supplied from material modules with pressure vessels or by feed pumps.

Typical applications

- Coating
- Encapsulating
- Gluing
- Rapid Prototyping
- Sealing
