The systems of the compomix product range are compact and solvent free metering and mixing systems.

They are used to handle low to medium viscosity multi component media such as polyurethane or epoxy for the production of fibre-reinforced plastics.

Material pressure vessels are used to supply the material.

The product range contains 5 types of systems

- compomix 103 D – bench top version
- compomix 103 M – with moveable chassis
- compomix 603 – for flow rates 200 ml/min and higher
- compomix 603 V – for vacuum supported infusion
- compomix I – for the infusion process to produce rotor blades for wind power generators
